

DNV GL HEALTHCARE

SPINE SURGERY PROGRAM CERTIFICATION

DNV GL Healthcare is dedicated to helping hospitals improve quality and patient safety. Certification of your Spine Surgery Program validates that your facilities and services meet or exceed standards of care in the complex specialty of spine surgery. That knowledge inspires pride and confidence among staff, patients, and your entire community.

More Than a Stamp of Approval

DNV GL certification adds value to your clinical program by being more than just an audit or certificate of compliance. During the certification process you'll identify which processes are working and which need improvement, ultimately allowing you to enhance performance and provide program differentiation. The information and lessons learned from the certification process will also enable you to engage and influence top management.

Certification Framework

Provide a framework that assists organizations in the development and implementation of systems and processes which improve operational effectiveness and enhance positive health outcomes.

DNV GL surveys emphasize results and creative thinking, not following checklists.

Certification Survey Components

The certification survey focuses on processes across the continuum of care that contribute to positive outcomes and support performance improvement.

- An annual announced survey
- Qualified DNV GL surveyor conducts the one day survey
- Survey agenda and document request list provided in advance to assist with organizational planning
- Audit activity incorporates program data review annually
- Survey activity audits the Spine Surgery Program across the continuum of care
- Access to the client drop box to respond to questions or obtain additional information

What Makes the DNV GL Healthcare Spine Surgery Program Unique?

Certification improves the Quality Management System by taking a broader view on what drives success. Together, we identify critical risks and relevant processes that impact long-term goals.
